

Continuous Flushing System

The **Evolution Continuous Flushing System** is designed to increase oil production by injecting produced water down a secondary string to assist in clearing solids buildup in the wellbore. Flushing from toe to heel keeps the wellbore cleaner resulting in longer and more consistent production. This system works especially well in horizontal applications and wells with high levels of solids.

Features

- Available in 2 styles (Straight Hang Adaptor and Coiled Side Entry)
- Can mount on 7", 9", or 11" tubing head flanges
- Flushing lines up to 2 3/8" conventional tubing or 2", 1 3/4" and 1 1/2" coiled tubing.
- Can leave flushing string in the well when pulling production string
- Improves shut-in well reactivation
- Only 15" added to wellhead height

Continuous Flushing System Operation
