

The **Evolution Dual Ram Rod-Grip BOP™**, Lower Ram Locks and Seals, holding the polish rod for safe and quick service operation to stuffing boxes and drive heads. Upper Ram is a Blind Ram used to isolate tubing pressure while servicing stuffing boxes, top drives, replacement, rod breaks, etc.

Key Features

- Rams seal and secure polish rod in place for safe operation.
- Upper rams are Blind rams for full well control
- Lower Rams seal and secure polish rod in place for safe operation
- Rotatable bottom flange for easy alignment to flow line
- Rams are safe and easy to rotate using standard 1-1/4" box end wrench
- Proof load of 35,000 pounds on lower Rams
- Hard coated locking surface prevents mechanical damage and corrosion
- Seals inboard of locking ram shaft threads to keep out solids and corrosives.
- Rams are pressure balanced for safe and easy actuation against pressure
- Various sizes and pressure applications
- 1-1/4" and 1-1/2" polish rod applications
- One 2" LPSO and one 3" LPSO (studded flanged outlets available)
- Access port feature for testing, pressure gauge or a control line
- Compliant to API 7A and Nace MRO175 corrosion standards
