

The **Evolution E-Style Tubing Rotator** (also known as the 'Eliminator') was developed as part of a system primarily designed to extend the life of production tubing in beam pumping and PC pumping wells.

Using a Tubing Rotator can extend the life of down-hole tubing by equalizing the tubing wear around the entire ID of the tubing instead of wearing through in a single spot.

Applications

- Bean Pump operations
- PC pumping wells

Key Features

- Minimal maintenance required
- Simple installation, removal, and maintenance
- Adds only 3.25" to overall wellhead height
- Replaces the conventional hanger with rotating hanger
- Maintains well control while stripping blow-out preventers (B.O.P.'s)
- Able to re-grease while well is in operation
- Works in temperatures up to 410° F (200° C)
- Reduces sand build-up
- Prolongs tubing life
- Can be installed with a flush by unit
- Easy to service
- Counter available to track string rotation
